PFC 450W Single Output power supply

AK450 series

Features:

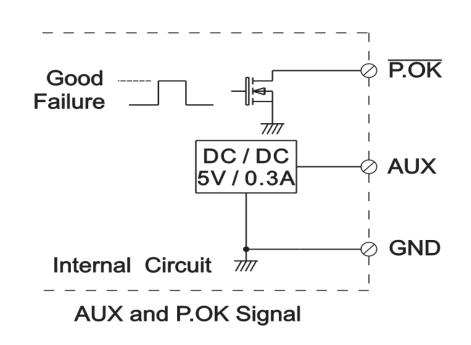

Universal AC input with active PFC High efficiency up to 93% +5V / 0.3A auxiliary output 150% Peak load Capability 1U profile, High power density **Built-in Constant current limiting circuit** Power OK signal (Power good, Logic low) Remote ON-OFF, Remote sense function

NOTE	 Al I parameters NOT specially mention De-rating may be needed under low in Ripple & noise are measured at 20MH Tolerance: includes set up tolerance, li 	led are measured at 230VAC input, ranged are measured at 230VAC input, ranged put voltages. Please check the de-rate of bandwidth by using a 12" twisted	ted load and 25°C of ambient ten					

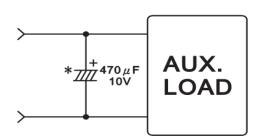

5. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed

that it still meets EMC directives.

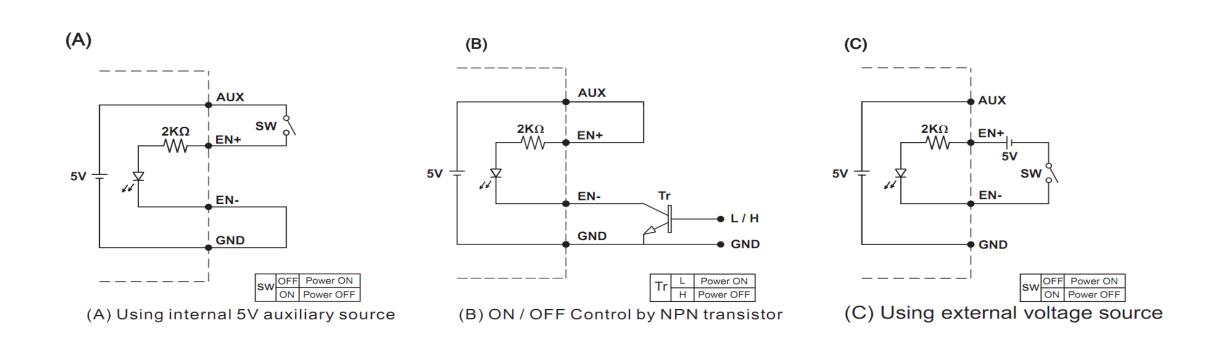

1. Power OK Signal and Auxiliary output

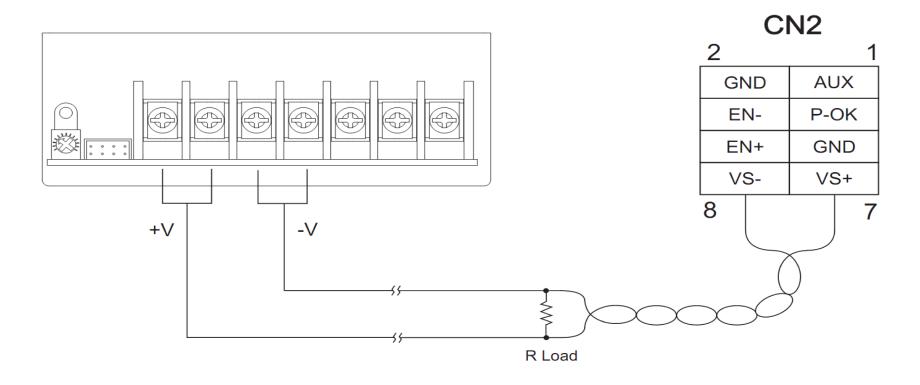

- *Place an additional capacitor to have a better performance of auxiliary power operation.
- *The grounding of "AUX" power should be connected to "GND" port. If "V-" is connected as Grounding, make sure to short the GND and V- ports.

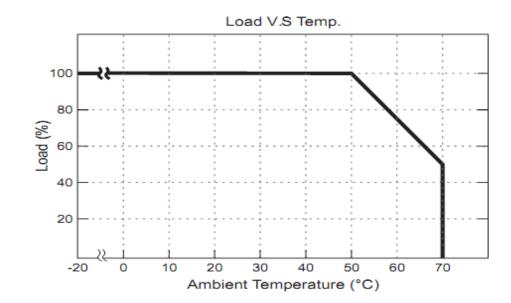

2. Remote ON/OFF Control

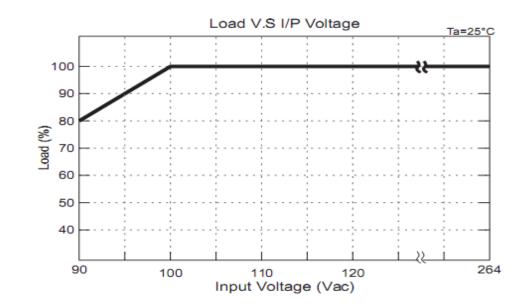

3. Remote Sense

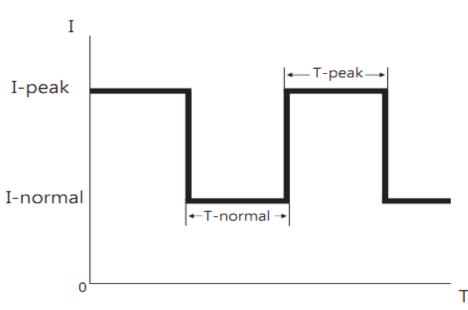

■ De-rating Curve

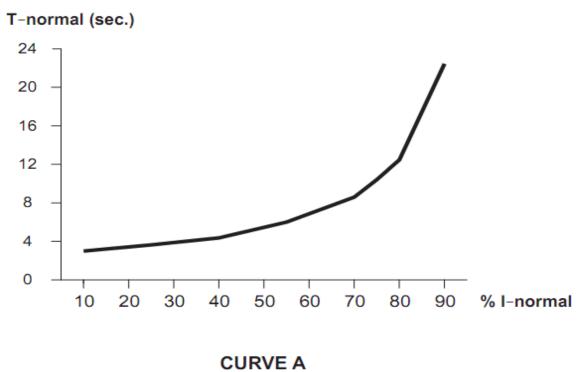

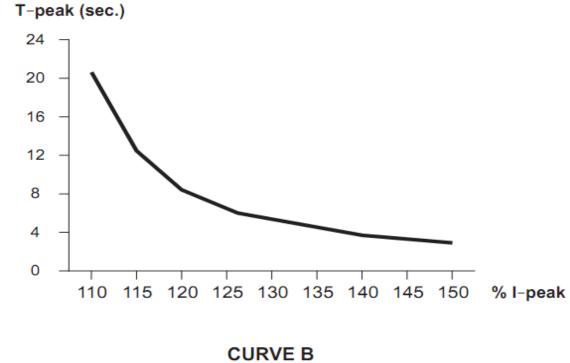

Peak Loading

T-PEAK represents the period during which the output current is at 110% to 150% of nominal (shown as I-PEAK). Curve B shows the relationship between the percentage of peak current (I-PEAK) and the allowable duration (T-PEAK).

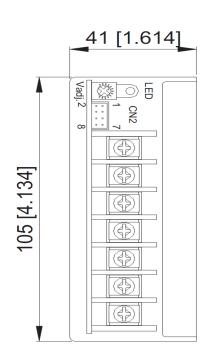

If the peak current is taken for longer that the allowed duration indicated by curve B, the output current will drop to a constant limited current of 105% of nominal, then. The unit between peak currents (T-NORMAL) is dependant up on the output current drawn between the peaks (I-NORMAL) and curve A shows the relationship between the two. The higher the percentage of normal current (I-NORMAL) is of the nominal current, the longer the interval (T-NORMAL) before the next peak current can be drawn.
